

Resolution of Public Consultation Comments for

ICRP *Publication 145* Adult Mesh-type Reference Computational Phantoms

Annals of the ICRP 49(4) 2020

Background

ICRP is grateful for the time and effort taken to review and comment on draft publications during their public consultation period. Active public consultations are a valuable part of developing high-quality publications. Comments are welcome from individuals and organisations, and all are considered in revising the draft prior to publication.

To ensure transparency, comments are submitted through the ICRP website and visible by visiting www.icrp.org.

Public Consultation

This draft report was available for public consultation from September to December 2018. As an individual, Richard Kramer from Federal University of Pernambuco provided a suggestion to include a literature review on previously developed mesh phantoms.

Resolution of Comments

Following the comment, a brief description on previously developed phantoms was added, including the differences from the newly developed phantoms (see Paragraph 12 and related references).
